BALA AKASH BURUNOLLA

Phone: +91 7731989938 | Email: burunollabalaakash10@gmail.com

GitHub: Balaakash56 | **LinkedIn:** Bala Akash Burunolla

PROFESSIONAL SUMMARY:

Passionate **DevOps Engineer** with expertise in **CI/CD automation, cloud technologies** AWS and DevOps best practices. Proficient in **Linux, Git, Docker, and Jenkins**, with hands-on experience in maintaining real-time CI/CD workflows. Skilled in basic Terraform and experienced with **AWS services (EC2, S3, VPC, IAM, SNS, CloudWatch, EBS, ELB, Auto Scaling, Lambda).** Adept at working in agile environments, optimizing deployment pipelines, and implementing scalable, resilient infrastructure solutions.

EDUCATION:

- **Bachelor of Computer Science Engineering**
  Malla Reddy College of Engineering, JNTU-Hyderabad | Jun 2019 – Feb 2023
- **Diploma in Computer Science Engineering**
  Govt. Polytechnic College, Nizamabad, Osmania University | Jun 2016 – May 2019

TECHNICAL SKILLS:

- **CI/CD Tools:** Jenkins CI/CD, pipeline.
- **Version Control:** Git, GitHub, GitLab
- **Operating Systems:** Linux (Ubuntu), Windows
- **Cloud & Containerization:** AWS **(EC2, S3, VPC, IAM, SNS, CloudWatch, EBS, ELB, Auto Scaling, Lambda)** , Docker
- **Automation & Configuration Management:** Terraform
- **Database:** MySQL, RDBMS
- **Server :** Apache, web server.
- **Programming & Scripting:** Python, Shell Scripting, Groovy, YAML.

PROFESSIONAL EXPERIENCE:

DevOps Support Engineer | Cognizant Technology Solutions | Nov 2025 – Present

- Engineered AWS EC2 deployments for Python Flask applications using Nginx/systemd via GitLab CI/CD pipelines; delivered 90%+ deployment success rate across production workloads.
- Automated Snowflake SQL data pipelines with Python orchestration for seamless dev/staging/prod promotions; implemented RBAC/security alignment across 10+ environments, cutting manual effort by 30%.
- Designed GitLab branching strategies (feature/develop/main) with automated quality gates (unit tests, linting, security scans); slashed deployment time from 2 days to 6 hours, boosting pipeline reliability by 40%.
- Maintained AWS environment parity and configuration consistency using Terraform IaC; coordinated sandbox refreshes and enforced DevOps standards through peer reviews for cross-functional teams.

- Monitored release performance metrics (failure rate, deployment frequency, MTTR) via AWS CloudWatch and custom Python dashboards; optimized 5+ GitLab workflows for zero-downtime releases in high-velocity environments.

DevOps Engineer Intern | Minfy Technologies Pvt. Ltd. | Jan 2024 – Nov 2024

- Architected end-to-end CI/CD pipelines using Jenkins/GitHub Actions, accelerating deployment cycles by 35% (weekly → daily releases) with integrated testing and rollback capabilities.
- Automated AWS infrastructure provisioning (EC2, S3, VPC, IAM, Lambda) via Terraform, managing 50+ resources with zero infrastructure drift and 100% environment consistency.
- Deployed highly scalable infrastructure using Elastic Load Balancer (ELB) and Auto Scaling, handling peak loads for 5+ applications while maintaining 99.9% uptime.
- Implemented CloudWatch monitoring/alerting; reduced unplanned downtime by 20% through proactive log analysis and automated incident response.
- Containerized 15+ microservices with Docker, eliminating deployment inconsistencies and enabling seamless dev/staging/prod parity.
- Hardened VPC network security (public/private subnets, NACLs, security groups, bastion hosts); reduced unauthorized access attempts by 60%**.**

PROJECTS

CI/CD Pipeline Automation | CI/CD Implementation for DTDC Company Project

- **Technologies:** Jenkins, Git, Python, java
- **Description:** Designed a **CI/CD pipeline** to automate testing and deployment of applications.
- **Responsibilities:**
  - Configured **GitHub Actions for automated testing**.
  - Wrote **Python-based test scripts** to validate deployments.
  - Integrated Jenkins for **automated deployment and rollback strategies**.

Automated Infrastructure Monitoring

- **Technologies:** AWS CloudWatch, Shell Scripting
- **Description:** Developed an **automated monitoring system** for cloud infrastructure using **AWS CloudWatch**. **Responsibilities:**
  - Configured **CloudWatch alarms and log groups** for system health monitoring.
  - Automated log collection and analysis using **Shell Scripting**.
  - Implemented alerting mechanisms to **identify infrastructure issues proactively**.

SOFT SKILLS

- **Analytical & Problem-Solving Skills** – Efficient in troubleshooting and optimizing solutions.
- **Strong Communication & Collaboration** – Effective team player with clear communication.
- **Agile & Scrum Experience** – Skilled in sprint planning and iterative development.
- **Adaptability & Continuous Learning** – Quickly learning new technologies and adapting to changes.
